

Table 2. Pipeline design comparisons. The blocks compare stance detection and integration anchors on their respective shared stride sets, so N differs. All other pipeline steps were held constant. Bias = IMU minus GaitRite.

Variant	N pairs	RMSE (cm)	Bias (cm)	MAE (cm)	ICC(2,1)
<i>Stance detection</i>					
Bilateral (canonical)	10,472	3.9	+0.3	2.5	0.976
Ipsilateral (threshold-only)	9,708	3.8	−0.3	2.4	0.976
<i>Gait-event timing anchor</i>					
Mid-stance (canonical)	10,459	3.9	+0.3	2.5	0.976
GaitRite heel strike	10,459	4.1	+1.1	2.8	0.973
